

I am incensed that anyone would consider stifling a communication and transportation tool such as the service for traffic and weather that XM is providing. I am looking forward to its availability in my area. The immediate and constant information available is a tool for my time management and safety. I think any action to limit XM Radio's ability to provide services for which its customers, like me, pay for is an outrage. With every fiber of my being I request the FCC to reject NAB's petition 04-160. If the NAB folks can to it better then do so, but don't stifle someone who is already doing it better.

Thank you.
